Triglyceride assay kit
(Classification No.: 30182000)

QUALIGENT TG

General Precautions
1. This product is for in vitro diagnostic use, and must not be used for any other purposes.
2. Clinicians should make a comprehensive clinical decision based on assay results in conjunction with clinical symptoms and other examination results.
3. This product should be used only as directed in this package insert. Reliability of results cannot be guaranteed if there are any deviations from the instructions in this package insert.
4. If the reagent accidentally comes in contact with eyes and/or mouth, rinse immediately with ample water as first aid, and consult the doctor if required.
5. Carefully read the operating instructions for each type of automated analyzers prior to using this product. Parameters for each type of analyzers are available, and can be requested from SEKISUI MEDICAL CO., LTD. if required.
6. Perform a quality control test prior to assay to ensure accuracy.

Description (Kit Components) **
Component: Ingredients
TG Enzyme Solution 1:
Glycerol kinase (microbial origin)
Glycerol-3-phosphate oxidase (microbial origin)
Catalase
Adenosine triphosphate disodium
N-ethyl-N-sulfobutyl-m-toluidine sodium
Good’s buffer
TG Enzyme Solution 2:
4-Aminoantipyrine
Lipoprotein lipase
Peroxidase
Good’s buffer

Intended Use
Measurement of triglyceride in serum or plasma

Triglycerides are formed by esterification between 3 fatty acid molecules and 1 glycerol molecule, and are the major component of lipids throughout the body. Measurement of triglycerides is considered to be useful for elucidating abnormalities of lipid metabolism. Attention has especially been focused on the association of triglycerides with arteriosclerosis and coronary artery disease.

Assay Principle
1. Assay Principle
First reaction: Free glycerol in the sample is converted to glycerol-3-phosphate by glycerol kinase (GK) in the presence of adenosine triphosphate (ATP). Then hydrogen peroxide is produced by glycerol-3-phosphate oxidase (GPO), after which hydrogen peroxide is decomposed into water and oxygen by catalase and these products are eliminated.

Second reaction: In the presence of LPL in TG-N enzyme solution 2, triglycerides in the sample are rapidly hydrolyzed to glycerol and fatty acids. The glycerol thus formed is converted to glycerol-3-phosphate by the action of GK in the presence of ATP, which is then converted to hydrogen peroxide in the presence of GPO. Hydrogen peroxide causes oxidative condensation of 4-aminoantipyrine and N-ethyl-N-sulfobutyl-m-toluidine (ESBmT) in the presence of peroxidase (POD) to form a red-purple color. The triglyceride content is determined by measuring the absorbance of the sample. The influence of ascorbic acid is blocked by ascorbate oxidase.

First reaction:

\[
\text{Glycerol + ATP} \rightarrow \text{Glycerol-3-phosphate + ADP}
\]

\[
\begin{align*}
\text{Glycerol-3-phosphate + O}_2 & \xrightarrow{\text{GPO}} \text{H}_2\text{O}_2 + \text{Dihydroxyacetone phosphate} \\
\text{Catalase} & \quad \text{H}_2\text{O}_2 \rightarrow \text{H}_2\text{O} + \text{O}_2
\end{align*}
\]

Second reaction:

\[
\begin{align*}
\text{LPL} & \quad \text{Triglycerides} \rightarrow \text{Glycerol + Fatty acids} \\
\text{Glycerol + ATP} & \xrightarrow{\text{GK}} \text{Glycerol-3-phosphate + ADP} \\
\text{Glycerol-3-phosphate + O}_2 & \xrightarrow{\text{GPO}} \text{H}_2\text{O}_2 + \text{Dihydroxyacetone phosphate} \\
\text{H}_2\text{O}_2 + \text{ESBmT} + 4\text{-Aminoantipyrine} & \xrightarrow{\text{POD}} \text{Red-purple color}
\end{align*}
\]

2. Features
1) The measurements of triglycerides and other analyte (such as free cholesterol and non-esterified fatty acids) are hardly affected by cross contamination.
2) Free glycerol is eliminated by the enzymatic method.
3) Bilirubin, hemolysis, ascorbic acid and chyle have minimal effects on results.

Procedural Precautions •
1. Properties of Samples and Sampling Methods
1) Samples
Serum and plasma (heparin plasma and EDTA plasma) may be used.
2) Storage of samples
If the isolated serum or plasma sample cannot
be tested on the same day, specimens should be stored as follows:
2–10°C: for tests within 1 weeks
≤ -20°C: for tests after more than 1 week
Bring samples to room temperature (15–30°C) before use.
3) Measurement of heparinized samples may yield artifically low values because decomposition of triglycerides is promoted.³

2. Interfering substances
Assay results are not affected by free bilirubin (up to 20 mg/dL), conjugated bilirubin (up to 20 mg/dL), hemoglobin (up to 500 mg/dL), and ascorbic acid (50 mg/dL).

3. Others
1) Always use Cholestest N Calibrator for calibration.
   However, use QUALIGENT N Calibrator for LABOSPECT 008 (manufactured by SEKISUI MEDICAL) as the calibration material with a Hitachi LABOSPECT 008 Automated Analyzer.
2) Precautions for assay range
   If the concentration of sample exceeds assay range, dilute the sample with saline and repeat the measurement.

Dosage/Administration (Assay Procedure)  
1. Preparation of reagents
   Reagent (1): TG Enzyme Solution 1 is ready to use.
   Reagent (2): TG Enzyme Solution 2is ready to use.
2. Assay Procedure
   This product is compatible with Hitachi 9000 series and LABOSPECT series automated analyzers. Assay procedure is indicated below.
   Sample 2 µL + Reagent (1) 180 µL 37°C Measurement (Absorbance I⁰)
   Measurement 5 min
   Reagent (2) 60 µL 37°C Measurement (Absorbance II⁰)
   Calculation of concentration

   *Absorbance I and II: The difference in absorbance between 700 nm and 600 nm.
   Calibration material: Cholestest N Calibrator
   Use QUALIGENT N Calibrator for LABOSPECT 008 (manufactured by SEKISUI MEDICAL) as the calibration material with a Hitachi LABOSPECT 008 Automated Analyzer. (Manufacture’s assigned value)
   Reagent blank: Purified water or saline

Assessment of Assay Results  
1. Reference standard range ²)
   Male: 40–234 mg/dL
   Female: 30–117 mg/dL
2. Diagnostic criterion ¹)
   Hypertriglyceridemia: ≥ 150 mg/dL
3. There may be reactions or interfering reactions with non-target substances. If assay results appear to be unreliable, repeat the measurement (if necessary, after dilution) or try another analytical methods.

Performance
1. Sensitivity
   1) Reagent blank: absorbance being equal to or lower than 0.05
   2) Sensitivity: The absorbance is 0.09–0.17 per 200 mg/dL of triglycerides.
2. Accuracy: 90–110 % of the expected assay value
3. Within-run Reproducibility:
   Coefficient of variation ≤ %
   (The test method used for 1–3 is that of Sekisui Medical Co., Ltd.)
4. Measurement Range⁶): (On a Hitachi 9000 series automated analyzer)
   3–2000 mg/dL
5. Correlation⁰)
   1) Serum N=70 r=0.999 y=0.98x–2.63
      Control method: Approved in vitro diagnostic (enzymatic method)
   2) Plasma N=71 r=0.999 y=0.99x–0.46
      Control method: Approved in vitro diagnostic (enzymatic method)

6. Standard Material
   Reference standard for lipid assay (Reference Material Institute for Clinical Chemistry Standards)

Precautions for Use or Handling  
1. Precautions for Handling (to Ensure Safety)
   1) All samples used in the test should be handled as a material possibly infected with HIV, HBV, HCV, or other viruses. To prevent infection, use disposable gloves and avoid mouth pipetting during the test.
   2) Cholestest N Calibrator and QUALIGENT N Calibrator for LABOSPECT 008 contain human-derived components that have been shown to be negative for HBs antigens, HIV antibodies (AIDS virus antibodies), and HCV antibodies. However, these reagents (as well as the samples) should be considered potentially infectious and handled with great care.
   3) TG enzyme solution 2 contains 0.0005 w/v% sodium azide to inhibit catalase activity. If this solution is accidentally ingested or comes into contact with the eyes or skin, immediately rinse the area with water and seek medical treatment, if necessary.
   4) Proclin 300, which possesses skin-irritative potential, is added as an antisepic agent in the TG Enzyme Solution 2. Therefore, if the reagent comes in contact with skin or clothes, rinse immediately with ample water, and consult the doctor if skin irritation develops.

2. Precautions for use
   1) This product should be stored as directed, without freezing. Freezing can deteriorate the reagents, which can produce inaccurate results. Therefore, avoid using the reagents which have been previously frozen.
   2) Do not use expired reagents. Use of such reagents cannot guarantee the reliability of measurement values.
   3) Do not perform the assay under direct sunlight
3. Precautions for Disposal

1) Before disposal, used samples and their containers must be immersed in sodium hypochlorite solution at a concentration of greater than 0.1% for longer than 1 hour or autoclaved at 121°C for 20 minutes.

2) To prevent infections from spilled samples or solutions containing samples, wipe the spilled area thoroughly with disinfectants such as sodium hypochlorite solution at a concentration of greater than 0.1%.

3) The reagents and treated samples should be discarded as medical waste or industrial waste according to the waste disposal regulations.

4) The reagents should be disposed of in accordance with the Water Pollution Control act or related regulations.

5) TG Enzyme Solution 2 contains 0.0005 W/v% sodium azide to prohibit activity of catalase. It can react with lead or copper pipes to produce the highly explosive metal azide. Therefore, the reagent should be flushed with large amounts of water during disposal.

4. Other precautions

1) Do not use the containers for other purposes.

2) Do not take apart the reagent cartridge before.

Storage and Shelf Life **

1. Storage temperature: 2–10°C

2. Shelf life: 1 year from the date of manufacture (The expiration date is printed on the outer package.)
